What is a connected place?

A 'connected place' is defined by the [National Cyber Security Centre \(NCSC\)](#) and the [Centre for the Protection of National Infrastructure \(CPNI\)](#) as:

A community that integrates information and communication technologies and Internet of Things (IoT) devices to collect and analyse data to deliver new services to the built environment, and enhance the quality of living for citizens.

A connected place will use a system of sensors, networks and applications to collect data to improve its operation, including its transportation, buildings, utilities, environment, infrastructure and public services.

Key Findings: Public Perceptions

Heard of 'Smart City'

■ Yes (43%) ■ No (57%)

Heard of 'Connected Place'

■ Yes (16%) ■ No (84%)

Common concerns:

- Security of individual data.
- Increased risk and consequences of cyber attacks.
- Costs (to taxpayers) of implementing and maintaining technologies.
- Not knowing which technologies were being used in their area, and if those managing these technologies were following all guidance and legal requirements.

**How can we
change
this?**

Key Findings: Public Perceptions Solution

Managers of connected places should engage more effectively with the public on connected places projects.

DSIT should create a repository of resources to support managers of connected places engage with the public.
